

ABSTRACT

TELECOMMUNICATIONS SYSTEMS

5 A method is disclosed for controlling data flow in a
telecommunications network in which a base station
communicates with a mobile station using a plurality of
packet data flows, the packet data flows having
respective data flow rates. The method comprises
10 controlling data flow through the network by
controlling the data flow rate of each packet data
flow, an overall data flow rate to the mobile station
and a data flow rate for each base station.
